

CLOSED CIRCUIT TELEVISION SERVICING COURSE

Aims:

- To enhance the skills of maintenance technicians to recognise and correct problems connected with the installation of closed circuit television equipment.
- To enable technicians to provide first aid service to closed circuit television equipment on site.

Objectives:

After training course members will be able to:

- Demonstrate knowledge of how a closed circuit television system operates.
- Recognise problems that can occur during installation.
- Install, set up and maintain:
 - Cameras and Lenses
 - Monitors
 - The Cabling System
 - Switching Units
 - Test and locate faults on the above units.

Programme Synopsis:

- Cables and signal transmission
- Closed Circuit Television Block Schematic
- The individual blocks in detail
- Setting up equipment for the best performance
- Installation Faults
- Safety when servicing units
- Pattern Generator, Setting Up and Use
- Equipment servicing and fault location

Duration: Two days

Course Code: TSCCCTV

Certificate: Training Solutions 2000

Delegates are invited to bring equipment and manuals so that they can learn on the equipment that they will be responsible for.
