

## WASTE MANAGEMENT SYSTEMS

### Introduction:

This programme identifies best practice in achieving compliance with the legal requirements relating to the handling of waste. It examines how organisations deal with their waste streams, what are the legal controls on this waste and the relevant costs to the organisations.

### Objective:

To provide delegates with the knowledge and tools to comply with the legal requirements of waste management.

### Programme Synopsis:

- Mapping the production process and identifying waste streams
- Definitions of General and Special Waste
- EU and UK Waste Legislation made simple!
- Assessing the value of waste and selecting the best management option
- Managing waste on site
- Managing waste off site – the Duty of Care
- Examining the options for reduction and recycling

**Duration:** One (1) Day

**Course Code:** TSCAWMS

**Certification:** Training Solutions 2000

## WASTE MINIMISATION

### Introduction:

This programme provides best practice guidelines, in order that organisations may adopt a proactive approach to waste minimisation.

### Objective:

To enable delegates to examine the savings opportunities and priorities for environmental protection, as well as to identify the relevant legislation with which organisations must comply.

### Programme Synopsis:

- The benefits of waste minimisation
- Waste mapping
- Legal Issues
- Waste Minimisation
- Waste Management
- Water Management
- Air quality Management
- Case studies

**Duration:** One (1) Day

**Course Code:** TSCAWMIN

**Certification:** Training Solutions 2000
